Executive Summary

Captured user stories that existed in `agent-plans/user-stories/` but were not yet included in a checkpoint: This checkpoint also explicitly references related technical planning updates in `agent-plans/` that represent fixes/standardization work not expressed as new user stories.

- Owner reservation ops court filtering (multi-court usability)
- Reservation policy behaviors (and docs alignment)
- Place photo uploads (owner-managed)
- Organization-scoped payment methods + organization-scoped reservation policy defaults (superseding legacy payment-instructions and court-scoped policy direction)

Checkpoint 07 Overview

Stories in This Checkpoint

ID	Domain	Story	Status
US-07-06	07-owner-confirmation	Owner Filters Reservation Ops by Court	Active
US-10-06	10-asset-uploads	Owner Uploads Place Photos	Active
US-12-01	12-reservation-policies	Owner Configures Reservation Policies Per Court	Superseded (by US-15-05)
US-12-02	12-reservation-policies	Player Booking Respects Court Policies	Active
US-12-03	12-reservation-policies	Player Cancels Reservation (All States)	Active
US-12-04	12-reservation-policies	Reservation State Machine Docs Updated	Active
US-15-01	15-organization-payment-methods	Owner Manages Organization Payment Methods	Active
US-15-02	15-organization-payment-methods	Owner Sets Default Payment Method	Active
US-15-03	15-organization-payment-methods	Player Sees Organization Payment Methods On Payment Page	Active
US-15-04	15-organization-payment-methods	Payment Methods Are Visible Only To Authorized Players	Active

ID	Domain	Story	Status
US-15-05	15-organization-payment-methods	Platform Applies Organization Reservation Policy Defaults	Active
US-15-06	15-organization-payment-methods	Owner Sees Payment Method Setup Reminders	Active

Key Decisions

- Multi-court owners need a consistent court filter across owner reservation ops (and it should persist during navigation).
- Payment account details must be treated as sensitive: only exposed in a reservation payment context to the authorized player.
- Reservation timing rules move toward organization-scoped defaults; prior court-scoped policy story is superseded.
- Owner UX should nudge payment method setup when required for smooth paid reservation flows.

Agent Plan Deltas (Non-story Fixes / Standardization)

Plan	Theme
`agent-plans/24-trpc-react-query-hooks/24-00-overview.md`	Standardize client data fetching to `trpc.*.useQuery/useMutation` + `trpc.useUtils()` invalidation
`agent-plans/20-timezone-alignment/20-00-overview.md`	Align booking/availability/pricing calculations to `place.timeZone`
`agent-plans/25-time-slot-datetime-validation/25-00-overview.md`	Normalize time slot datetimes to UTC `Z` ISO on the wire
`agent-plans/18-slot-hours-derivation/18-00-overview.md`	Derive bulk slot creation from court hours windows (remove manual time inputs)
`agent-plans/17-payment-flow-ux/17-00-overview.md`	Centralize payment instructions in payment route; remove duplicates in booking review
`agent-plans/15-reservation-refresh/15-00-overview.md`	Add refresh controls + reservation event timeline
`agent-plans/23-google-maps-embed-poc/23-00-overview.md`	Public map/embed PoC + hardening guidance
`agent-plans/27-organization-payment-methods/27-00-overview.md`	Implementation plan for org payment methods + org policy defaults

Derived Engineering Stories

Derived from referenced agent plans in this checkpoint.

DS-24

Derived

Standardize client data fetching to `trpc.*.useQuery/useMutation` + `trpc.useUtils()` invalidation

Derived from `agent-plans/24-trpc-react-query-hooks/24-00-overview.md`. Standardize all client-side data fetching and mutations to the canonical tRPC React Query hook signatures: - `trpc.<router>.<procedure>.useQuery(input?, opts?)` - `trpc.<router>.<procedure>.useMutation(opts?)` This removes the mixed patterns currently in the codebase: - `useTRPC()` + TanStack `useQuery(trpc.*.queryOptions(...))` - `useTRPCClient()` + manual `useQuery({ queryKey, queryFn })` and replaces them with a single, type-safe, rename-resilient API surface. ### Completed Work (if any) - None yet. ### Reference Documents | Document | Location | |----------|----------| | Context | `agent-plans/context.md` | | User Story (Type-safe invalidation) | `agent-plans/user-stories/13-trpc-utils-invalidation/13-01-type-safe-invalidation.md` | | tRPC Docs (React Query usage) | https://trpc.io/docs/client/react | | tRPC Docs (TanStack React Query integration) | https://trpc.io/docs/client/tanstack-react-query |

Acceptance Criteria

Success Criteria

No remaining `queryOptions()` / `mutationOptions()` usage
No remaining `useTRPC()` / `useTRPCClient()` usage for standard fetching
Mutations use `trpc.*.useMutation` and invalidate via `trpc.useUtils()`
TypeScript compiles with no missing symbols
`pnpm lint` passes
`pnpm build` passes

DS-20

Derived

Align booking/availability/pricing calculations to `place.timeZone`

Derived from `agent-plans/20-timezone-alignment/20-00-overview.md`. Align booking, availability, and pricing calculations to the place's IANA timezone across server and client surfaces. ### Completed Work (if any) - Added timezone utilities and updated availability/pricing/booking flows to use place-local day boundaries and formatting. ### Reference Documents | Document | Location | |----------|----------| | Context | `agent-plans/context.md` | | User Stories | `agent-plans/user-stories/06-court-reservation/`, `agent-plans/user-stories/05-availability-management/` | | Design System | See `agent-plans/context.md` | | ERD | See `agent-plans/context.md` |

Acceptance Criteria

Success Criteria

Availability and pricing stay consistent under `TZ=UTC` runtime
Booking and owner slot times display in place timezone
Day boundaries respect DST transitions
Build passes

DS-25

Derived

Normalize time slot datetimes to UTC `Z` ISO on the wire

Derived from `agent-plans/25-time-slot-datetime-validation/25-00-overview.md`. Normalize time slot timestamps to UTC on the wire while continuing to derive local scheduling from `place.timeZone`. ### Reference Documents | Document | Location | |----------|----------| | Context | `agent-plans/context.md` | | User Stories | `agent-plans/user-stories/05-availability-management/05-01-owner-creates-time-slots.md` | | Design System | See `agent-plans/context.md` |

Acceptance Criteria

Success Criteria

Bulk slot creation sends UTC `Z` timestamps
Slot availability queries send UTC `Z` timestamps
No invalid datetime errors for non-UTC places

DS-18 Derived

Derive bulk slot creation from court hours windows (remove manual time inputs)

Derived from `agent-plans/18-slot-hours-derivation/18-00-overview.md`. Align bulk slot creation with court hours windows so owners no longer input start/end times. Slot generation uses court hours as source of truth, skips days without windows, and auto-trims to 100 slots. ### Reference Documents | Document | Location | |----------|---------| | Context | `agent-plans/context.md` | | User Stories | `agent-plans/user-stories/05-availability-management/` | | User Stories | `agent-plans/user-stories/14-place-court-migration/` | | Design System | See `context.md` |

Acceptance Criteria

Success Criteria

Bulk slot modal has no time inputs
Slots derive from court hours windows
Days without hours are skipped
Slot generation auto-trims to 100
Existing `timeSlot.createBulk` API remains unchanged
`pnpm lint` and `pnpm build` pass

DS-17 Derived

Centralize payment instructions in payment route; remove duplicates in booking review

Derived from `agent-plans/17-payment-flow-ux/17-00-overview.md`. Move payment instructions into the dedicated payment route and remove duplicate payment info from the booking review screen. Align the payment card with policy-based payment details from the time slot. ### Completed Work (if any) - Payment page uses `PaymentInfoCard` and proof form for `AWAITING_PAYMENT`. ### Reference Documents | Document | Location | |----------|----------| | Context | `agent-plans/context.md` | | User Stories | `agent-plans/user-stories/06-court-reservation/` | | Design System | See `context.md` | | ERD | See `context.md` |

Acceptance Criteria

Success Criteria

Booking review page no longer shows payment info
Payment page shows payment info card with policy details
UI uses existing payment proof flow
`pnpm lint` and `pnpm build` pass

DS-15 Derived

Add refresh controls + reservation event timeline

Derived from `agent-plans/15-reservation-refresh/15-00-overview.md`. Add manual refresh controls for player/owner reservation pages and replace the player activity card with a full audit timeline backed by reservation events. ### Reference Documents | Document | Location | |----------|----------| | Context | `agent-plans/context.md` | | User Stories | `agent-plans/user-stories/06-court-reservation/`, `agent-plans/user-stories/07-owner-confirmation/` | | Reservation Contract | `docs/reservation-state-machine-level-2-engineering.md` |

Acceptance Criteria

Success Criteria

Player reservation detail has a refresh button and full event timeline.
Owner reservations list has a refresh button (no page reload).
Owner active reservations page has a refresh button (no wait for interval).
Activity timeline reflects all transitions with timestamps and roles.
`pnpm lint` and `pnpm build` pass.

DS-23 Derived

Public map/embed PoC + hardening guidance

*Derived from `agent-plans/23-google-maps-embed-poc/23-00-overview.md`. Add a proof-of-concept page at `/poc/google-loc` that lets a developer paste a Google Maps URL (including `maps.app.goo.gl` short links), resolves it server-side, extracts `lat/lng/zoom`, and renders a Google Maps iframe embed. This plan intentionally targets the **lowest ongoing cost** setup: - No Places API - No Geocoding API - No Time Zone API - Only the Maps Embed API key for iframe rendering (key is exposed client-side; must be restricted) ### Reference Documents | Document | Location | |----------|---------| | Context | `agent-plans/context.md` | | User Stories | `agent-plans/user-stories/23-google-maps-embed-poc/` | | Maps Embed docs | https://developers.google.com/maps/documentation/embed | | API security best practices | https://developers.google.com/maps/api-security-best-practices |*

Acceptance Criteria

> ### Success Criteria
>
> `/poc/google-loc` loads and can preview the sample short link
> API rejects non-Google redirect targets
> Missing `NEXT_PUBLIC_GOOGLE_MAPS_EMBED_KEY` shows a clear warning
> Map embeds appear in discovery map view and reservation details
> `pnpm lint` and `pnpm build` pass

DS-27 Derived

Implementation plan for org payment methods + org policy defaults

*Derived from `agent-plans/27-organization-payment-methods/27-00-overview.md`. This plan introduces **organization-scoped payment methods** (mobile wallet + bank) with **per-method instructions** and a single **default method**, and moves reservation timing policy to an **organization-scoped policy table** with **defaults only (not editable yet)**. It also removes the legacy place-scoped `reservable_place_policy` to avoid duplicated configuration and to prevent payment account details from being exposed via public endpoints. ### Reference Documents | Document | Location | |----------|----------| | Context | `agent-plans/context.md` | | User Stories | `agent-plans/user-stories/15-organization-payment-methods/` | | Design System | `business-contexts/kudoscourts-design-system.md` | | Legacy P2P Payment Story | `agent-plans/user-stories/08-p2p-reservation-confirmation/08-01-02-payment-page-display-payment-instructions.md` | | Legacy Reservation Policies Story | `agent-plans/user-stories/12-reservation-policies/12-01-owner-configures-reservation-policies.md` |*

Acceptance Criteria

> **Success Criteria**
>
> Owners can CRUD payment methods and set a default.
> Players see active methods only within their reservation payment context.
> No public endpoint returns payment account numbers.
> Reservation TTL/cancellation logic reads org policy defaults.
> `pnpm lint` and `pnpm build` pass.

Domain: 07-owner-confirmation

Overview

The Owner Confirmation domain enables organization owners to review and action pending reservations. When a player books a paid court and marks payment as complete, the owner must confirm (or reject) the reservation to finalize the booking. This domain implements a **simplified confirmation flow**: 1. Owner views list of pending reservations with enriched data 2. Owner confirms payment → reservation CONFIRMED, slot BOOKED 3. Owner rejects → reservation CANCELLED, slot AVAILABLE **Simplified scope:** This version focuses on basic confirm/reject without payment proof display. See `08-p2p-reservation-confirmation` for full P2P verification flow.

Domain: 10-asset-uploads

Overview

This domain covers file upload functionality using Supabase Storage. It enables players, owners, and admins to upload various assets (profile avatars, payment proofs, court photos, organization logos) with proper access control and validation. **Key Capabilities:** - Profile avatar uploads for players - Payment proof uploads for reservation verification - Court photo uploads for owners and admins - Organization logo uploads for owners

Domain: 12-reservation-policies

Overview

This domain adds **per-court reservation policies** so that different courts can enforce different reservation behavior. Core policy goals: - Court owners can configure reservation policies **per court** - Player booking and cancellation behavior is enforced **server-side** - Owner confirmation is **optional per court** (toggle) - Reservation TTLs are **court-specific** (not hardcoded)

Domain: 15-organization-payment-methods

Overview

This domain defines how court owners (organizations) configure **payment methods** for peer-to-peer (P2P) payments. Owners can add multiple payment methods (e.g., GCash, bank transfer) and provide **per-method instructions**. One method can be set as the **default**. Players see these payment methods only when they have an active reservation that requires payment. This domain also introduces an **organization-scoped reservation policy** (system defaults for now) to replace place-scoped policy storage.

US-07-06

Active

Owner Filters Reservation Ops by Court

*As an **organization owner**, I want to **filter reservations by court across owner reservation ops** so that **I can focus on one court at a time when I manage multiple courts**.*

Acceptance Criteria

Court Filter Availability

Given I am an owner with multiple courts
When I view owner reservation ops
Then I can select **All Courts** or a **specific court**

Reservations Page

Given I am on `/owner/reservations`
When I select a court in the court filter
Then the reservations list is filtered to that court
And the selection persists when I change tabs

Active Reservations Page

Given I am on `/owner/reservations/active`
When I select a court in the court filter
Then the active queue is filtered to that court

Alerts Panel

Given the floating alerts panel is open
When I select a court in the panel filter
Then only reservations for that court appear
And the "View all" link routes to `/owner/reservations/active` with the same court filter

Persistence

Given I selected a specific court
When I navigate between owner pages
Then the selection persists for the session

Edge Cases

Scenario	Behavior
Owner has 0 courts	Court filter shows only "All Courts" and lists are empty
Invalid `courtId` value	Falls back to "All Courts"
Owner switches organizations	Court filter reflects the current org courts

US-10-06

Active

Owner Uploads Place Photos

*As a **Place Owner**, I want to **upload and manage photos for my place** so that **players can see what the venue looks like before booking**.*

Acceptance Criteria

Happy Path: Upload First Place Photo

Given I am logged in as an owner
And I am editing one of my places
When I select a valid image file (JPEG, PNG, or WebP under 5MB)
Then the image is uploaded successfully
And the photo is associated with the place
And the photo appears in the place photo gallery on the public place page
And the uploaded photo becomes the cover photo (first in order)

Happy Path: Upload Multiple Photos

Given I am logged in as an owner
And I am editing a place that already has photos
When I upload additional images
Then each image is uploaded successfully
And all photos appear in the place gallery
And I can reorder photos

Happy Path: Set Cover Photo

Given I am logged in as an owner
And the place has multiple photos
When I set a photo as the cover photo
Then it appears first in the ordered list
And it is used as the cover image wherever a cover image is shown

Happy Path: Delete Place Photo

Given I am logged in as an owner
And the place has photos uploaded
When I delete a photo
Then the photo record is removed
And the underlying storage object is deleted
And the photo no longer appears in the public place gallery

Validation: Cannot Upload for Others' Places

Given I am logged in as an owner
When I try to upload a photo for a place not owned by my organization
Then I receive an authorization error
And the file is not uploaded

Validation: File Constraints

Given I am logged in as an owner
When I select an image larger than 5MB
Then I see an error message indicating the file is too large
And when I select a non-image file
Then I see an error message indicating the file type is invalid

Edge Cases

Scenario	Behavior
Delete last remaining photo	Allowed, gallery shows placeholder
Upload during slow connection	Show progress, allow retry
Duplicate image upload	Allow
Very large dimensions	Accept (no resizing in MVP)
Reorder after deletion	Remaining photos reorder correctly

Form Fields

Field	Type	Required
Place Photo	file (image)	No
Display Order	number	Auto-assigned
Cover Photo	boolean	Derived from order (first photo)

US-12-01

Superseded

Owner Configures Reservation Policies Per Court

*As an **organization owner**, I want to **configure reservation policies for a specific court** so that **each court can have rules that match how it operates**.*

Acceptance Criteria

Policy Configuration

Given I am an owner of a reservable court
When I open the court edit/settings page
Then I can configure reservation policies specific to that court

Required Policy Inputs (MVP)

Given I am editing a court
When I view reservation policy settings
Then I can set:
Whether the court **requires owner confirmation** or not
The payment hold window in minutes (for paid reservations)
The cancellation cutoff in minutes (relative to slot start)

Persistence

Given I saved new policy settings
When I revisit the court edit/settings page
Then I see the saved values

Edge Cases

Scenario	Behavior
Court is not reservable	Policy settings are hidden or read-only
Invalid minutes value	Input is rejected with a clear error
Owner has multiple courts	Policies are saved per court without affecting others

US-12-02

Active

Player Booking Respects Court Policies

*As a **player**, I want **booking behavior to follow the court's configured policies** so that **I have a predictable and fair booking experience**.*

Acceptance Criteria

Booking Flow Uses Court Policies

Given I am booking a slot for a specific court
When I attempt to reserve the slot
Then the system enforces that court's reservation policy (server-side)

Owner Confirmation Toggle

Given the court is configured to **not require owner confirmation**
When I complete the required booking steps (e.g., mark payment complete)
Then the reservation transitions to its final confirmed state without owner intervention
Given the court **requires owner confirmation**
When I complete the required booking steps
Then the reservation becomes pending owner review and requires owner confirm/reject

TTL Visibility

Given the court has a payment hold window
When I see a reservation requiring payment
Then I can see the time remaining before expiration

Edge Cases

Scenario	Behavior
Court policies change mid-reservation	Existing reservations continue with the rules captured at creation (or clearly documented behavior)
Player tries to reserve an invalid/expired slot	Reservation is rejected with a clear error

US-12-03 Active

Player Cancels Reservation (All States)

*As a **player**, I want to **cancel my reservation in any state** so that **I can correct mistakes or free the slot if I can no longer attend**.*

Acceptance Criteria

Cancellation Allowed Across States

Given I have a reservation
When I choose to cancel it
Then cancellation is allowed regardless of its current state

Cutoff Enforcement

Given a court has a cancellation cutoff policy
When the reservation is too close to the slot start time
Then cancellation is blocked with a clear reason

Slot Release

Given I successfully cancel a reservation
When cancellation completes
Then the underlying time slot becomes available again

Edge Cases

Scenario	Behavior
Reservation is already expired or cancelled	Cancellation is idempotent or shows a clear "already ended" state
Slot has started or ended	Cancellation is blocked (cutoff effectively reached)

US-12-04

Active

Reservation State Machine Docs Updated

*As a **product and engineering team**, we want the **reservation state machine documentation to reflect the current behavior** so that **stakeholders share the same understanding of reservation rules and TTLs**.*

Acceptance Criteria

Documentation Update

Given reservation policies are implemented
When the docs are reviewed
Then `docs/reservation-state-machine.md` and its linked levels are updated to reflect:
Court-specific TTL behavior
Optional owner confirmation behavior
Player cancellation across all states (with cutoff)

Edge Cases

Scenario	Behavior
Docs disagree with implementation	Implementation is treated as source of truth; docs must be corrected

US-15-01 Active

Owner Manages Organization Payment Methods

*As an **organization owner**, I want to **add, edit, and remove payment methods for my organization** so that **players can pay me using the correct wallet or bank account**.*

Acceptance Criteria

Add Payment Method

Given I am the owner of an organization
When I add a new payment method
Then I must choose:
Method type: **Mobile Wallet** or **Bank**
Provider name (from a PH-only dropdown list)
Account name
Account number
Optional instructions specific to this method
And the new payment method is saved under my organization

Edit Payment Method

Given I am the owner of an organization
When I edit an existing payment method
Then I can update the provider, account name, account number, and instructions
And the updated values are saved

Remove Payment Method

Given I am the owner of an organization
When I delete a payment method
Then it is no longer shown to players

Multiple Payment Methods

Given I am the owner of an organization
When I add multiple payment methods
Then all active methods are saved and listed under my organization

Edge Cases

Scenario	Behavior
Owner tries to add duplicate method (same provider + account number)	System rejects or warns; does not create duplicate
Owner deletes the current default method	System prompts to set a new default or auto-selects another method
Owner has no payment methods configured	Players see a fallback message to contact owner
Invalid account number format	Save is blocked with a clear validation message

Form Fields

Field	Type	Required
Method Type	select (Mobile Wallet / Bank)	Yes
Provider	select (PH constants)	Yes
Account Name	text	Yes
Account Number	text	Yes
Instructions	textarea	No
Active	toggle	Yes

US-15-02 Active

Owner Sets Default Payment Method

*As an **organization owner**, I want to **set a default payment method** so that **players see the recommended option first**.*

Acceptance Criteria

Set Default

Given I am the owner of an organization
When I mark a payment method as default
Then that method becomes the organization's default
And there is at most **one** default method at a time

Default Visibility

Given my organization has a default payment method
When a player views payment methods on the payment page
Then the default method is displayed first and/or visually marked as "Recommended"

Edge Cases

Scenario	Behavior
Owner sets default on an inactive method	System prevents it or activates the method first
Owner has only one method	That method can be set as default
Owner removes default method	System requires another default or falls back to first active

US-15-03 Active

Player Sees Organization Payment Methods On Payment Page

*As a **player**, I want to **see the organization's payment methods (wallet/bank) with clear instructions** so that **I know exactly how to pay and what reference details to include**.*

Acceptance Criteria

Display Active Payment Methods

Given I have a reservation that requires payment
When I open the payment page
Then I see the organization's active payment methods
And each method displays:
Provider name (e.g., GCash, BPI)
Account name
Account number
Per-method instructions (if provided)

Copy Account Number

Given I am on the payment page
When I click "Copy" for a payment method
Then the account number is copied to clipboard

Default Method Highlight

Given the organization has a default payment method
When I open the payment page
Then the default payment method is shown first and/or marked as recommended

Fallback When No Methods

Given the organization has not configured any active payment methods
When I open the payment page
Then I see a fallback message telling me to contact the owner for payment details

Edge Cases

Scenario	Behavior
Only wallet methods exist	Only wallet methods are shown
Only bank methods exist	Only bank methods are shown
Very long instructions	Text wraps and remains readable
Clipboard permission denied	Show an error message and provide the account number for manual copy

US-15-04

Active

Payment Methods Are Visible Only To Authorized Players

*As a **player**, I want **payment method details to be visible only when I'm allowed to pay** so that **sensitive account details aren't exposed publicly**.*

Acceptance Criteria

Reservation Ownership Gate

Given I am authenticated
When I request payment method details for a reservation
Then I only receive payment method details if I am the owner of that reservation

Reservation Status Gate

Given I am the reservation owner
When the reservation is not in a payment-related status
Then payment method details are hidden or not returned

No Public Exposure

Given I am not authenticated or I do not own the reservation
When I browse public court or time slot endpoints
Then I do not see any payment method account numbers

Edge Cases

Scenario	Behavior
Reservation was cancelled/expired	Payment methods are not returned
Reservation is already confirmed	Payment methods are not returned
Player has multiple reservations	Authorization checks are scoped per reservation

US-15-05 Active

Platform Applies Organization Reservation Policy Defaults

*As the **platform**, I want to **apply reservation policy defaults at the organization level** so that **reservation timing rules are consistent across all places/courts in the same organization**.*

Acceptance Criteria

Default Policy Exists For Organization

Given an organization exists
When the platform needs to evaluate reservation timing rules
Then the organization has a reservation policy record
And default values are applied if the owner has not configured anything

Owner Review Window

Given a player requests a reservation that requires owner acceptance
When the reservation is created
Then the owner review TTL is calculated using the organization policy's owner review minutes

Payment Hold Window

Given an owner accepts a paid reservation
When the reservation transitions to "Awaiting Payment"
Then the payment window TTL is calculated using the organization policy's payment hold minutes

Cancellation Cutoff

Given a player attempts to cancel a reservation
When the system checks eligibility
Then cancellation eligibility uses the organization policy's cancellation cutoff minutes

Edge Cases

Scenario	Behavior
Organization policy record missing	System uses sane defaults and creates/repairs the missing record
Organization owns multiple places	Policy applies consistently across all places

US-15-06

Active

Owner Sees Payment Method Setup Reminders

*As an **organization owner**, I want to be reminded to add payment methods when setting up my places or reviewing reservations so that I can receive payments on time.*

Acceptance Criteria

New Place Flow Reminder

Given the owner opens `owner/places/new`
When the organization has zero payment methods
Then show a reminder card above the place form
And the card links to the payment methods section in owner settings
And the reminder is hidden once at least one payment method exists

Owner Reservations Reminder

Given the owner opens `owner/reservations`
When the organization has zero payment methods
Then show an informational reminder card near the top of the page
And the card links to the payment methods section in owner settings
And the reminder is hidden once at least one payment method exists

Edge Cases

Scenario	Behavior
Organization data still loading	Hide the reminder until data is available
Owner has no organization	Do not show reminder
Payment methods request fails	Hide the reminder and allow the page to function

Form Fields

Field	Type	Required
N/A	-	-
