Executive Summary

This checkpoint captures the full v1.2 Place/Court migration domain. Player discovery and booking flows operate on **Places** (venues) containing multiple **Court units** (bookable units), with 60-minute slot granularity, time-window pricing, and support for “Any available court” selection.

US-14-11	14-place-court-migration	Owner Filters Slots/Reservations By Place And Court	Active

Key Decisions

- **Model split:** Place = venue/listing, Court = bookable unit (1 court = 1 sport).
- **Granularity:** Booking durations are multiples of 60; slots are published in 60-minute increments.
- **Any-available selection:** choose the **lowest total price** option across matching courts.
- **Overnight support:** court hours can span midnight and remain bookable.

Domain: 14-place-court-migration

Overview

This domain covers the product and UX changes required to move from the legacy model where a single "court" represented a location, into the v1.2 model:

- **Place** = venue/location listing (multi-sport capable)
- **Court** = a single bookable unit inside a place (1 court = 1 sport)
- **Slot** = availability for a specific court

It includes player-facing UX (choose sport → choose specific court or "Any available" → book), owner tooling (manage places, courts, hours, pricing rules, slots), and migration continuity.

Player Discovers Places With Sport Filters

*As a **player**, I want to **discover places near me and filter by sport** so that **I can quickly find a venue that supports the sport I want to play**.*

Acceptance Criteria

Place Discovery Supports Sport Filtering

Given I am browsing discovery results
When I apply a sport filter (e.g., Pickleball, Basketball)
Then the list/map shows places that have at least one court for that sport

Place Card Communicates Sports Available

Given a place appears in discovery results
When I view the place card
Then I can see which sports are available at that place

Edge Cases

Scenario	Behavior
Place has no active courts for a sport	Place does not appear for that sport filter
Sport data is incomplete during migration	Place still appears, but sport badges are omitted and UI remains usable

US-14-02

Active

Player Views Place Detail And Chooses Court Unit

*As a **player**, I want to **view a place's courts and choose a specific court** so that **I know exactly which physical court I am booking**.*

Acceptance Criteria

Place Detail Shows Courts

Given I open a reservable place detail page
When the page loads
Then I can see a list of courts at the place

Court List Shows Sport And Tier Label

Given courts are displayed
When I view a court row/card
Then I can see the court's sport and optional tier label (e.g., Premium)

Court Selection Drives Availability

Given I select a specific court
When I view availability
Then the slot list reflects availability for that court

Edge Cases

Scenario	Behavior
Court is inactive	Court is not selectable
Place is curated (view-only)	Court list may be shown as informational, but booking UI is not available

US-14-03

Active

Player Chooses Duration In 60-Minute Increments

*As a **player**, I want to **choose a booking duration in 60-minute increments** so that **I can book longer sessions while keeping pricing and availability predictable**.*

Acceptance Criteria

Default Duration Is 60 Minutes

Given I'm starting a booking flow for a court
When I view duration options
Then the default duration is 60 minutes

Duration Options Are Multiples Of 60

Given I'm selecting a duration
When I change the duration
Then the selectable durations are multiples of 60 minutes (e.g., 60/120/180)

Longer Durations Require Continuous Availability

Given I select a duration greater than 60 minutes
When I pick a start time
Then the system only allows booking if the full duration is available for that court

Price Updates With Duration

Given the court is paid
When I change the duration
Then the displayed total price updates to reflect the selected duration

Edge Cases

Scenario	Behavior
Court has availability gaps	UI prevents selecting durations that can’t be satisfied
Pricing windows change during the selected duration	Total price reflects the rules for each hour segment (documented behavior)

US-14-04

Active

Player Books A Specific Court (Mutual Confirmation)

*As a **player**, I want to **book a specific court at a place** so that **my reservation is tied to a known physical court and follows the platform's mutual-confirmation rules**.*

Acceptance Criteria

Booking Creates A Request And Holds The Slot

Given I select a specific court and an available slot
When I request the booking
Then a reservation is created in `CREATED` (awaiting owner acceptance)
And the slot transitions to `HELD` immediately

Owner Acceptance Is Required (Free And Paid)

Given I requested a booking
When the owner accepts within the acceptance window
Then for free bookings: reservation becomes `CONFIRMED` and slot becomes `BOOKED`
And for paid bookings: reservation becomes `AWAITING_PAYMENT` and a payment window starts

Player Can See Assigned Court In Reservation Details

Given a reservation exists
When I view reservation details
Then I can see the place name and the court label (e.g., Court 7)

Edge Cases

Scenario	Behavior
Owner does not accept in time	Reservation becomes `EXPIRED` and slot returns to `AVAILABLE`
Slot becomes unavailable before request completes	Booking request fails with a clear error

US-14-05

Active

Player Books “Any Available Court” At A Place

*As a **player**, I want to **book “any available court” at a place for a given sport** so that **I can reserve time even if I don’t care which exact court I get**.*

Acceptance Criteria

Any-Available Mode Is Offered

Given a place has multiple courts for a sport
When I begin booking
Then I can choose “Any available court” instead of picking a specific court

System Assigns A Specific Court For The Booking

Given I chose “Any available court”
When I request a booking for a start time and duration
Then the system assigns a specific court that can satisfy the request
And the reservation details show the assigned court label

Assignment Uses A Documented Rule

Given multiple courts could satisfy the request
When the system chooses one
Then the selection follows a documented rule (deterministic and fair)

Edge Cases

Scenario	Behavior
No courts can satisfy the request	Booking request fails with a clear “no availability” message
Two players attempt the same slot simultaneously	Only one booking request succeeds; the other receives a conflict/not-available error

US-14-06

Active

Owner Creates A Place With Multiple Courts

*As an **organization owner**, I want to **create a place listing and add multiple courts (each with a sport)** so that **I can represent my real venue structure and accept bookings per court**.*

Acceptance Criteria

Owner Creates A Place Listing

Given I am an authenticated organization owner
When I create a new place
Then the place is created with address/location details and is manageable in owner tools

Owner Adds Courts To A Place

Given I have a place
When I add a court to the place
Then I can set the court label, sport, and optional tier label

One Court Has One Sport

Given I am creating or editing a court
When I choose the sport
Then the court is saved with exactly one sport

Edge Cases

Scenario	Behavior
Duplicate court label within a place	Owner is prevented from saving duplicates and sees a clear message
Place is inactive/deactivated	Courts cannot be booked by players

US-14-07 Active

Owner Configures Day-Specific Court Hours (Incl. Overnight)

*As an **organization owner**, I want to **configure day-specific operating hours for each court (including overnight)** so that **availability reflects real operations and bookings only happen during open windows**.*

Acceptance Criteria

Owner Sets Weekly Hours Per Court

Given I am managing a specific court
When I configure operating hours
Then I can set hours per day-of-week

Supports Multiple Windows And Breaks

Given I am configuring hours for a day
When I add more than one window (e.g., morning + evening)
Then both windows are saved and reflected in availability guidance

Supports Overnight By Splitting Across Days

Given I want to set an overnight window (e.g., 22:00–02:00)
When I save operating hours
Then the system stores the schedule in a way that represents that overnight availability

Edge Cases

Scenario	Behavior
Court has no hours for a day	That day is treated as closed (not bookable)
Invalid window (end before start)	Owner is prevented from saving and sees a clear message

US-14-08

Active

Owner Configures Hourly Pricing Rules Per Court

*As an **organization owner**, I want to **set hourly pricing by day-of-week and time windows per court** so that **I can charge different rates for morning/afternoon/evening and overnight**.*

Acceptance Criteria

Owner Sets Pricing Windows Per Court

Given I am managing a specific court
When I configure pricing
Then I can set one or more price windows per day-of-week

Pricing Is Expressed As An Hourly Rate

Given I am setting a price window
When I save the configuration
Then the system stores an hourly rate and currency

Pricing Supports Overnight

Given I want a pricing rule that applies overnight
When I save pricing rules
Then the pricing can represent overnight periods in a consistent way

Edge Cases

Scenario	Behavior
Pricing windows overlap	Owner is prevented from saving overlaps (or overlaps require an explicit priority)
Pricing does not cover all open hours	Slots that fall outside coverage are not publishable as paid slots (documented behavior)

US-14-09 Active

Owner Publishes 60-Minute Slots With Prices

*As an **organization owner**, I want to **publish 60-minute availability slots for a specific court with correct pricing** so that **players can book reliably and see accurate prices**.*

Acceptance Criteria

Slots Are Created In 60-Minute Increments

Given I am creating slots for a court
When I create or bulk-create slots
Then each slot duration is a multiple of 60 minutes

Slot Prices Are Available To Players

Given a slot is available
When a player views it
Then the slot displays a price and currency (or clearly indicates free)

Slot Prices Can Be Overridden

Given a court has hourly pricing rules
When I set a specific slot price override
Then the overridden price is used for that slot's display and booking

Edge Cases

Scenario	Behavior
Owner creates overlapping slots	Creation is rejected with a clear error
Owner creates slot outside operating hours	Creation is rejected (or flagged) with a clear message

US-14-10

Active

Platform Migrates Existing Court Listings Into Place/Court Model

*As a **platform admin**, I want **existing data migrated into the new Place/Court model** so that **we can ship court-unit selection and multi-sport places without breaking existing users**.*

Acceptance Criteria

Existing Listings Remain Discoverable

Given the platform has existing "court" listings from the legacy model
When migration is completed
Then those listings remain discoverable as places

Existing Reservations Remain Visible And Correct

Given a player has an existing reservation
When they view it after migration
Then reservation details still show the correct venue and booked time

Existing Slots Preserve Availability

Given existing time slots exist
When migration is completed
Then those slots remain available/held/booked consistently with their prior state

Edge Cases

Scenario	Behavior
Partial migration / mixed data state	The application remains usable and avoids broken pages
Legacy listing cannot map cleanly	The system assigns a default court unit and marks missing details for owner/admin follow-up

US-14-11 Active

Owner Filters Slots/Reservations By Place And Court

*As an **organization owner**, I want to **filter slot management and reservations by place and court** so that **I can operate venues with many courts efficiently**.*

Acceptance Criteria

Owner Can Filter By Place

Given I manage multiple places
When I open owner slot or reservation tools
Then I can filter/select a place

Owner Can Filter By Court Within Place

Given I selected a place
When I filter further
Then I can choose a specific court to manage

Filters Are Reflected In Displayed Data

Given I selected filters
When the page loads or refreshes
Then only slots/reservations for the selected place/court appear

Edge Cases

Scenario	Behavior
Selected court becomes inactive	UI informs owner and prompts to select another court
User has no places/courts yet	UI shows an empty state with a clear next action
