KudosCourts

Product Requirements Document (MVP)

Version: 1.2

Last Updated: January 12, 2026

Status: Draft

KudosCourts — Product Requirements Document (MVP)

Version: 1.2
Last Updated: January 12, 2026
Status: Draft

Document History

Version	Date	Author	Changes
1.0	-	-	Initial MVP specification
1.1	2025-01-07	-	Added claiming flow, detailed data model decisions, multi-currency support, audit trail requirements, refined reservation lifecycle
1.2	2026-01-12	-	Introduced Place→Court model (multi-sport venues), specific court-unit selection + "Any available", day-specific hours (incl. overnight), hourly pricing rules, 60-minute granularity; aligned reservation lifecycle with `docs/reservation-state-machine.md`

1. Overview

KudosCourts is a player-first, location-based sports venue discovery and reservation platform.

The MVP focuses on:

- Helping players discover **places** (venues) nearby.
- Letting players reserve **specific courts** (court units) at those places via a unified booking flow.
- Monetizing via a simple on-page banner ad.

The platform supports:

- **Manually curated places** — View-only listings with external contact information
- **Reservable places** — Full booking capability with P2P-style payment confirmation
- **Place claiming** — Admin-approved process for organizations to claim curated place listings

KudosCourts does not process payments or facilitate direct communication between players and venue owners.

1.1 Terminology (v1.2)

This version introduces explicit naming to avoid ambiguity:

- **Place**: a physical venue/location (address, map pin, photos, amenities).
- **Court**: an individual bookable unit inside a place (e.g., "Court 3").
- **Sport**: the sport a court supports (v1.2 constraint: **1 court = 1 sport**).
- **Time Slot / Slot**: a bookable time period for a specific court.

---

2. Problem Statement

Players lack a single, reliable way to discover nearby venues and reserve time on specific courts. Meanwhile, many venue owners/operators do not have an online reservation system, resulting in fragmented booking processes across social media pages, messaging apps, spreadsheets, and calls.

KudosCourts solves this by providing:

- One discovery layer for players
- One standardized reservation engine for participating venues
- A neutral platform that avoids payment and communication liability
- A pathway for curated places to become fully bookable

---

3. Goals (MVP)

3.1 Primary Goals

Goal	Description
Discovery	Enable players to discover places and courts by location
Reservation	Enable players to reserve courts using a unified booking flow
P2P Payment	Support payment confirmation without handling money
Near-real-time Availability	Provide current slot availability (polling acceptable for MVP)
Revenue	Generate early revenue via banner ad placement
Place Claiming	Allow organizations to claim and manage curated place listings

3.2 Explicit Product Constraints

- Player experience is the primary focus (players-first approach)
- Inventory may be bootstrapped by manual curation before owner onboarding exists
- No payment processing — all payments happen externally (GCash, bank transfer, cash)
- No in-app messaging between players and owners
- Place claiming requires admin approval

---

4. Users & Personas

4.1 Player (Primary User)

Needs:

- Find places near them
- See hours, amenities, and photos
- Choose a specific court (or "any available court")
- Reserve a slot when available
- For paid bookings: confirm payment without in-app payment processing

Common Behaviors:

- Mobile-first usage
- Short time-to-action (wants to book quickly)
- May not want to create a full profile initially

4.2 Organization Owner

Needs:

- List multiple places and courts across different sports
- Publish and manage availability per court
- Configure hours per court (day-specific, including overnight)
- Configure hourly pricing per court (time-of-day bands)
- Confirm payments for reservations (P2P confirmation)
- Claim existing curated place listings

MVP Simplification:

- Owner-only access (no staff roles)
- Single owner per organization

4.3 Platform Admin (Internal)

Needs:

- Review and approve place claiming requests
- Manage curated place inventory
- Handle removal requests

---

5. Place Types & Behavior

5.1 Place Type Overview

In v1.2, "Curated vs Reservable" applies to the **place listing**.

Attribute	Curated Place	Reservable Place
Purpose	Bootstrap inventory	Full booking capability
Organization	Optional (can be unclaimed)	Required
Booking	View-only, external contact	In-app reservation
Payment	N/A	Free or Paid (P2P)
Availability	Not shown	Slot-based display (per court)
Sports	May include metadata	Each place can have multiple courts, each court has 1 sport

5.2 Curated Places (Default at Launch)

Purpose: Bootstrap inventory quickly without requiring owner participation.

Behavior:

- Discoverable via location search + map
- Place detail page includes:
  - Name and address
  - Photos (if available)
  - Amenities (if available)
  - Contact socials (Facebook, Viber, Instagram, website)
- View-only: no booking inside KudosCourts

- Clearly labeled as "Contact to Book" or equivalent

Claim Status:

- `UNCLAIMED` — Default state, available for claiming
- `CLAIM_PENDING` — Claim request submitted, awaiting admin approval
- `CLAIMED` — Owned by an organization (transitions to Reservable)
- `REMOVAL_REQUESTED` — Owner requested removal from listing

Metric Behavior:

- Excluded from reservation funnel metrics (e.g., completion rate)

5.3 Reservable Places (Managed/Participating)

Purpose: Places that use the KudosCourts reservation engine.

Behavior:

- Discoverable via location search + map
- Place detail includes:
  - A list of courts (court units) at the place (e.g., Court 1, Court 2)
  - Court sport (basketball/pickleball/etc)
  - Availability calendar UI
  - Booking UI
- Supports two booking pricing models:
  - **Free** — No payment required
  - **Paid** — Requires P2P payment confirmation flow

Key v1.2 requirement:

- Players can choose:
  - A **specific court** at the place (e.g., Court #7), OR
  - **Any available court** at that place (system auto-assigns an available court for the chosen time)

Requirements:

- Must be owned by an organization

- Must have at least one reservable court with at least one time slot configured

---

6. Place Claiming Flow

6.1 Overview

Organizations can request to claim ownership of curated places. This transitions the place from view-only to fully reservable.

6.2 Claiming Process

```
┌──────────────┐    ┌────────────────┐    ┌──────────────┐    ┌────────────────┐    ┌────────────┐
│ Org owner    │──►│ Find curated │──►│ Submit       │──►│ Admin        │──►│ Place now │
│ logs in      │    │ place          │    │ claim        │    │ approves     │    │ reservable│
└──────────────┘    └────────────────┘    └──────────────┘    └────────────────┘    └────────────┘
```

Step 1: Submit Claim Request

- Organization owner identifies an unclaimed curated place
- Submits claim request with optional justification notes
- Place claim status → `CLAIM_PENDING`
- Claim request created with status `PENDING`

Step 2: Admin Review

- Admin reviews claim request in admin dashboard
- Can view requester's organization details
- Approves or rejects with optional notes

Step 3a: Approval

- Claim request status → `APPROVED`
- Place claim status → `CLAIMED`
- Place listing becomes `RESERVABLE`
- Place assigned to requesting organization
- Organization can now:
    - Add/manage courts at this place (each court has 1 sport)
    - Manage hours and pricing
    - Manage availability and receive bookings

Step 3b: Rejection

- Claim request status → `REJECTED`
- Place claim status → `UNCLAIMED`
- Requester notified (future: email notification)

6.3 Removal Request Flow

Claimed place owners may request to remove their listing:

1. Owner submits removal request
2. Place claim status → `REMOVAL_REQUESTED`
3. Admin reviews and processes removal
4. Place either deactivated or returned to curated status

6.4 Audit Trail

All claim request status transitions are logged with:

- Previous status
- New status
- User who triggered the change
- Timestamp
- Optional notes

---

7. Core User Journeys

Journey 1: Discover a Place (Curated / View-Only)

Step	Action	System Response
1	Player opens app/site	Display search interface
2	Searches by location	Query places, display on map + list
3	Selects a curated place	Show place detail page
4	Views contact information	Display social links (Facebook, Viber, etc.)
5	Leaves platform to contact	External redirect

Journey 2: Discover and Reserve a Free Court (Owner Acceptance Required)

> Reservation contract source of truth: `docs/reservation-state-machine.md` and levels 0–3.

Step	Action	System Response
1	Player searches by location	Display reservable places
2	Selects a place	Show place detail + list of courts
3	Chooses a court (or "Any available")	Show availability and booking UI
4	Picks date + start time (60-min grid)	Validate slot availability
5	Requests booking	Create reservation `CREATED`, slot `HELD`, 15-min owner acceptance timer
6	Owner accepts within 15 minutes	Reservation → `CONFIRMED`, slot → `BOOKED`
7	Player views confirmation	Display reservation details

Transaction: Slot status changes `AVAILABLE` → `HELD` immediately on request; confirmation changes `HELD` → `BOOKED`.

Journey 3: Discover and Reserve a Paid Court (P2P) — Mutual Confirmation

Step	Action	System Response
1	Player searches by location	Display reservable places
2	Selects a place	Show place detail + list of courts
3	Chooses a court (or "Any available")	Show availability and booking UI
4	Picks date + start time (60-min grid)	Validate slot availability
5	Requests booking	Reservation `CREATED`, slot `HELD`, 15-min owner acceptance timer
6	Owner accepts within 15 minutes	Reservation → `AWAITING_PAYMENT`, payment timer resets to fresh 15 minutes
7	Player views payment instructions	Display GCash/bank details
8	Player pays externally	(Outside platform)
9	Accepts T&C, clicks "I Have Paid"	Status → `PAYMENT_MARKED_BY_USER` (does not extend TTL)
10	(Optional) Uploads proof	Store payment proof
11	Owner confirms payment	Status → `CONFIRMED`, slot → `BOOKED`
12	Player views confirmation	Display reservation details

Journey 4: Owner Confirms Payment

Step	Action	System Response
1	Owner opens dashboard	Display pending reservations
2	Views reservation details	Show player info, slot, payment proof
3	Confirms payment	Reservation → `CONFIRMED`, Slot → `BOOKED`
4	(Automatic) Player notified	(Future: push/email notification)

Journey 5: Owner Manages Availability (Per Court Unit)

Step	Action	System Response
1	Owner opens dashboard	Display place + courts
2	Selects a court	Show availability calendar
3	Configures court hours (day-specific)	Store weekly hours windows
4	Configures hourly pricing rules	Store price windows (per day + time)
5	Creates time slots	Validate no overlap, save slots
6	(Optional) Overrides price per slot	Store slot-level override
7	Slots become available	Players can now book

8. Reservation System

8.0 Contract Reference

The reservation state machine is documented and versioned here:

- `docs/reservation-state-machine.md`
- `docs/reservation-state-machine-level-0-summary.md`
- `docs/reservation-state-machine-level-1-product.md`
- `docs/reservation-state-machine-level-2-engineering.md`
- `docs/reservation-state-machine-level-3-ops.md`

In v1.2, the PRD must match that contract.

8.1 Reservation Statuses

Status	Description	Slot State
`CREATED`	Booking request created by player; awaiting owner acceptance	HELD
`AWAITING_PAYMENT`	Owner accepted a paid request; waiting for player payment	HELD
`PAYMENT_MARKED_BY_USER`	Player marked payment as complete; awaiting owner confirmation	HELD
`CONFIRMED`	Reservation complete	BOOKED
`EXPIRED`	Timer expired	AVAILABLE (released)
`CANCELLED`	Reservation cancelled/rejected	AVAILABLE (released)

8.2 Reservation Lifecycle — Free Courts (Mutual confirmation)

```
┌──────────┐     ┌──────────────┐
│ CREATED  │──►  │ CONFIRMED    │
└──────────┘     └──────────────┘
     │
     │
     ├──────────────►┌──────────────┐
     │               │ CANCELLED    │
     │               └──────────────┘
     │
     └──────────────►┌──────────┐
                     │ EXPIRED  │
                     └──────────┘
```

- Slot is held immediately when player requests (CREATED)
- Owner acceptance required within 15 minutes

8.3 Reservation Lifecycle — Paid Courts (Mutual confirmation before payment)

```
┌──────────┐     ┌────────────────────┐     ┌──────────────────────────┐     ┌──────────────┐
│ CREATED  │──►  │ AWAITING_PAYMENT   │──►  │ PAYMENT_MARKED_BY_USER   │──►  │ CONFIRMED    │
└──────────┘     └────────────────────┘     └──────────────────────────┘     └──────────────┘
     │                  │                          │
     │                  │                          │
     │                  └──────────────►┌──────────┐
     │                                  │ EXPIRED  │
     │                                  └──────────┘
     │
     ├──────────────►┌──────────────┐
     │               │ CANCELLED    │
     │               └──────────────┘
     │
     └──────────────►┌──────────┐
                     │ EXPIRED  │
                     └──────────┘
```

8.4 TTL (Time-to-Live) Rules

Rule	Value
Owner acceptance window	15 minutes on `CREATED`
Payment window	Fresh 15 minutes when owner accepts a paid request (`AWAITING_PAYMENT`)
After player marks paid	Does not extend TTL (`PAYMENT_MARKED_BY_USER` keeps same expiresAt)
Expiration behavior	Slot released, reservation marked `EXPIRED`
Same-day booking	Permitted

8.5 Player Information Snapshot

When a reservation is created, the system captures:

- Player display name
- Player email
- Player phone number

This ensures historical accuracy if the player updates their profile after booking.

---

9. Time Slot Management

9.1 Design Approach

Explicit Slot Creation — Every bookable slot is a database record.

Rationale:

- Simple availability queries
- Transactional integrity for bookings
- Easy to block individual slots

- Clear audit trail

UI handles bulk creation — The frontend provides calendar-style interfaces for creating multiple slots; the backend receives explicit slot records.

9.2 Time Slot Attributes (v1.2)

Attribute	Description
Place	The venue/location the court belongs to
Court	The specific court unit the slot belongs to
Sport	The sport of the court unit
Start time	Slot start (timestamp with timezone)
End time	Slot end (timestamp with timezone)
Duration	**60-minute base granularity**; longer durations are multiples of 60
Status	AVAILABLE, HELD, BOOKED, BLOCKED
Price	Amount in smallest currency unit (cents)
Currency	ISO 4217 code (PHP, USD, etc.)

9.3 Slot Granularity (New Requirement)

- Minimum start-time increment: **60 minutes**
- Default booking duration: **60 minutes**
- Allowed durations: **multiples of 60** (e.g., 60/120/180), subject to availability

> Note: The technical implementation may represent longer bookings as either:
>
> - a single longer slot record, or

- multiple consecutive 60-minute slots reserved together.
  The product requirement is that the player can select longer durations in 60-minute increments.

9.4 Time Slot Statuses

Status	Description	Who Can Transition
`AVAILABLE`	Open for booking	System (on release)
`HELD`	Held during request/payment windows	System (on reservation start)
`BOOKED`	Confirmed reservation	System (on confirmation)
`BLOCKED`	Manually blocked by owner	Owner

9.5 Status Transitions

```
AVAILABLE ──┬──▶ HELD ──┬──▶ BOOKED
            │           │
            │           └──▶ AVAILABLE (expired)
            │
            └──▶ BLOCKED ──▶ AVAILABLE (owner unblocks)
```

9.6 Pricing Model (Hourly, Time-of-Day)

Hourly pricing by rule windows (per court):

- Price is defined as **hourly rate** and varies by:
  - Day of week
  - Time-of-day window (e.g., morning/afternoon/evening)
- Because the slot granularity is 60 minutes, a 60-minute slot price is typically:
  - `slotPriceCents = hourlyRateCents`
- Longer durations (120/180/etc) must compute total price consistently:

- `totalPriceCents = hourlyRateCents * hours` (or rule-based sum if multiple windows apply)

Slot-level overrides remain supported:

- A specific slot can override the computed/default price (promos, special events).

Examples:

- Morning: ₱200/hour
- Evening: ₱350/hour
- Weekend: ₱400/hour

9.7 Overlap Prevention

Handled at the repository layer:

- Before creating a slot, check for overlapping time ranges
- Reject creation if overlap detected
- Provide clear error messaging to owner

---

10. Discovery & Availability

10.1 Discovery Requirements

Feature	Description
Location search	Search by current location or city/area name
Sport filtering	Filter results by sport(s) available at a place
List view	Scrollable list of places with key details
Map view	Google Maps embed with place markers
Filtering	By listing type (curated vs reservable)
Both types shown	Curated and reservable places in same results

10.2 Availability Requirements

Feature	Description
Near-real-time updates	Near-real-time via polling (not websockets)
Court selection	Player can choose specific court OR "any available court"
Calendar view	Date picker for selecting booking date
Slot display	Available slots shown with time and price
Visual status	Clear indication of available vs booked

11. Player Profiles

11.1 Overview

Players authenticate via Supabase Auth and have an optional profile for additional details.

11.2 Profile Attributes

Attribute	Required	Description
Display name	No	Friendly name shown to owners
Email	No	Contact email (may differ from auth email)
Phone number	No	Contact phone for reservations
Avatar	No	Profile picture URL

11.3 MVP Simplification

- Profile creation is optional
- Minimal fields for v1
- No social features or player history display
- Profile updates do not affect historical reservation snapshots

12. Organization Management

12.1 Overview

Organizations represent place owners/operators (tenants in the system).

12.2 Organization Attributes

Attribute	Required	Description
Name	Yes	Organization display name
Slug	Yes	URL-friendly identifier (unique)
Owner	Yes	User who owns/manages the organization
Active status	Yes	Can be deactivated by admin

12.3 Organization Profile

Extended information for public display:

Attribute	Description
Description	About the organization
Logo	Organization logo URL
Contact email	Public contact email
Contact phone	Public contact phone
Address	Business address

12.4 MVP Simplification

- One owner per organization (no staff roles)
- Owner manages all places and courts under the organization
- No self-registration (admin creates organizations or via claiming flow)

13. Ads (MVP Monetization)

13.1 Scope

- One banner ad only
- Hardcoded placement and content for MVP

13.2 Placement

Location	Priority
Discovery screen (map/list page)	Primary
Place detail page	Secondary (optional)

13.3 Requirements

- Ad does not block or degrade core user flows
- Non-intrusive placement
- No tracking or analytics required for MVP

13.4 Out of Scope (MVP)

- Ad targeting
- Ad rotation
- Advertiser dashboard
- Click/impression analytics

14. Non-Functional Requirements

14.1 Multi-tenancy & Data Safety

Requirement	Description
Tenant isolation	Organization data is isolated; owners only see their places/courts
Double-booking prevention	System prevents booking same slot twice
Row-level security	Database enforces access control

14.2 Reliability

Requirement	Description
Transaction consistency	Reservation state transitions are atomic
Slot integrity	Slot status always matches reservation status
TTL enforcement	Background job expires stale reservations

14.3 Performance (MVP Scale)

Metric	Target
Organizations	~100 in early scale
Concurrent users	Moderate (polling acceptable)
Response time	< 2s for search and booking

14.4 Data Retention

Data Type	Retention
Active reservations	Indefinite
Past reservations	1 year minimum
Time slots	Archive after 90 days
Audit logs	1 year minimum

15. Audit & Compliance

15.1 Reservation Audit Trail

All reservation status transitions are logged:

Field	Description
Reservation ID	Which reservation
From status	Previous status (null for creation)
To status	New status
Triggered by	User ID or SYSTEM
Role	PLAYER, OWNER, or SYSTEM
Timestamp	When the transition occurred
Notes	Optional context

15.2 Claim Request Audit Trail

All claim request status transitions are logged:

Field	Description
Claim request ID	Which request
From status	Previous status
To status	New status
Triggered by	Admin user ID
Timestamp	When the transition occurred
Notes	Review notes

15.3 Purpose

- Dispute resolution between players and owners
- Accountability for admin actions
- Debugging and support
- Future analytics on conversion funnel

---

16. Success Metrics

16.1 Primary Metric

Reservation Completion Rate

- Definition: Confirmed reservations / Reservation attempts
- Excludes: Curated place views (no booking capability)

16.2 Supporting Metrics

Metric	Description
Search-to-detail conversion	Users who view a place after searching
Detail-to-reservation start	Users who initiate booking after viewing
Time-to-confirm (P2P)	Average time from booking request to owner confirmation
TTL expiration rate	Percentage of bookings that expire
Active places listed	Total places (curated + reservable)
Claim conversion rate	Approved claims / Total claim requests

---

17. Legal & Liability Requirements

17.1 Platform Neutrality

KudosCourts must remain neutral and avoid payment liability.

17.2 Required Disclosures

Terms & Conditions must clearly state:

- KudosCourts does not process or verify payments
- Payment disputes are between player and venue owner
- KudosCourts is not liable for booking disputes

17.3 User Acknowledgement

Before marking payment as complete, players must:

- Accept Terms & Conditions via explicit checkbox

- Acknowledge the payment disclaimer

17.4 Audit Trail

- All payment confirmations are logged
- Player acknowledgement timestamp preserved
- Supports dispute investigation if needed

---

18. Deferred (Not in MVP)

The following features are explicitly out of scope for MVP:

Feature	Reason
Client spaces / subdomains	Complexity; evaluate post-MVP
Owner self-registration	Use claiming flow instead
Reviews and ratings	Requires moderation system
Messaging / chat	Liability concerns
Refund / dispute resolution	Out of platform scope
Staff roles and permissions	Single owner sufficient for MVP
Custom domains / white-labeling	Enterprise feature
Advanced advertising	Requires ad platform integration
Push notifications	Can use email for MVP
Recurring bookings	Single booking sufficient for MVP
Waitlist for full slots	Complexity
Calendar integrations	Post-MVP enhancement

Appendix A: Glossary

Term	Definition
Place	A venue/location listing (address + map pin + media + amenities)
Court	An individual bookable unit inside a place (Court #1, Court #7, etc.)
Sport	The sport supported by a court (v1.2: 1 court = 1 sport)
Curated Place	A place added by KudosCourts team, view-only with external contact info
Reservable Place	A place with in-app booking capability, owned by an organization
P2P Payment	Peer-to-peer payment outside KudosCourts (GCash, bank, cash)
TTL	Time-to-live timers (owner acceptance + payment windows)
Soft Lock / Hold	Temporary hold on a slot (`HELD`) while the reservation is active
Claim	Process of an organization taking ownership of a curated place
Organization	A venue owner/operator entity (tenant in multi-tenant system)
Slot	A bookable time period for a specific court
Any Available Court	Booking mode where system auto-assigns an available court at the chosen time

Appendix B: Related Documents

Document	Description
`docs/reservation-state-machine.md`	Reservation state machine index + current contract
`docs/reservation-state-machine-level-1-product.md`	Product narrative for reservation contract
`docs/reservation-state-machine-level-2-engineering.md`	Engineering contract for statuses + TTL
`docs/reservation-state-machine-level-3-ops.md`	Ops contract for reservation management
User Stories & Use Cases	Detailed acceptance criteria for each feature
ERD Specification	Database design and technical implementation details
DDL Script	PostgreSQL schema definition

Appendix C: Open Questions

Question	Status	Decision
Supported booking durations beyond 60 minutes?	TBD	v1.2 requires multiples of 60; technical approach TBD
Should "Any available court" prioritize cheapest or tier order?	TBD	Product decision
Email notifications for reservation status changes?	Deferred	Post-MVP
SMS notifications?	Deferred	Post-MVP
Cancellation policy configuration?	Deferred	Simple cancellation for MVP
Owner-initiated cancellation?	TBD	Need to define flow
